DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Art Unit: 1713

4. Claims 1-8 are rejected under 35 U.S.C. 102(a) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Kredlinger *et al.* (WO 01/85855; equivalent document U.S. 6,761,764 relied upon for translation).

Kredlinger *et al.* discloses a powdercoating material comprising the essentially the same additive of the instant claims. The polyolefin wax component has a dropping point of 90-160 °C, melt viscosity of 10-10,000 mPa-s, and a density of 0.89-0.96 g/cm³ (col. 2, lines 56-61, claims 1-5). The overall particle size distribution, d₉₀ is less than 40 µm (col. 4, line 45). The amount of wax and additive is 1-99 wt % and 99-1 wt %, respectively (col. 4, line 36). Waxes may also be polar modified (col. 2, lines 62-66, claim 8). Powder coating material and articles coated with the powder coating material are shown in the examples (col. 6, line 63 and col. 7, line 26). Kredlinger *et al.* does not disclose the molecular weight distribution of the polyolefin wax component, however a reasonable basis exists to believe that the wax of the prior art exhibits the claimed molecular weight distribution, especially in view of the fact that polyolefin waxes are prepared from metallocene-based catalysts (col. 3, lines 1-28), and in light of the fact that the wax exhibits all other properties recited in the claims. Since the PTO can not conduct experiments, the burden of proof is shifted to the Applicants to establish an unobviousness difference. *In re Fitzgerald*, 619 F.2d. 67, 205 USPQ 594 (CCPA 1980). See MPEP § 2112-2112.02.
